E-mail address: a.azar@put.ac.ir

## Highlights

- A new form of information filters is introduced.
- The algorithm is implemented in a distributed architecture to address large scale systems' practical limitations.
- A heuristic decomposition based on physical insight is applied.
- A typical bias fault in sensor measurements is simulated.
- The proposed diagnostic method is applied to Alkylation of Benzene process.

## Abstract

A fault monitoring system plays an important role to ensure and improve the reliability of an industrial plant to operate safely and efficiently. For large-scale systems, their high-
