

Author's Accepted Manuscript

Membrane modeling using CFD: combined evaluation of mass transfer and geometrical influences in 1D and 3D

Bahram Haddadi, Christian Jordan, Martin Miltner, Michael Harasek

PII: S0376-7388(17)33599-8
DOI: <https://doi.org/10.1016/j.memsci.2018.05.040>
Reference: MEMSCI16180

To appear in: *Journal of Membrane Science*

Received date: 25 December 2017
Revised date: 18 May 2018
Accepted date: 20 May 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting galley proof before it is published in its final citable form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Membrane modeling using CFD: combined evaluation of mass transfer and geometrical influences in 1D and 3D
