Dynamics of partial cavitation in an axisymmetric converging-diverging nozzle

Saad Jahangir, Willian Hogendoorn, Christian Poelma

PII: S0301-9322(17)30966-7  
DOI: [10.1016/j.ijmultiphaseflow.2018.04.019](https://doi.org/10.1016/j.ijmultiphaseflow.2018.04.019)  
Reference: IJMF 2798

To appear in: *International Journal of Multiphase Flow*

Received date: 8 December 2017  
Revised date: 23 February 2018  
Accepted date: 29 April 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Using high-speed visualization, we characterize two distinct mechanisms causing periodic, partial cavitation in a venturi.
- The governing parameter that determines which mechanism is dominant is the cavitation number.
- Estimates are given for the shock wave velocity in both the liquid and cavity region.
