The lifespan of clusters in confined bubbly liquids

B. Figueroa-Espinoza, B. Mena, A. Aguilar-Corona, R. Zenit

PII: S0301-9322(17)30873-X
DOI: [10.1016/j.ijmultiphaseflow.2018.05.012](https://doi.org/10.1016/j.ijmultiphaseflow.2018.05.012)
Reference: IJMF 2812

To appear in: *International Journal of Multiphase Flow*

Received date: 8 November 2017
Revised date: 16 May 2018
Accepted date: 17 May 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Clustering phenomena is studied experimentally in a 2D bubbly flow.
- Clustering occurs, the size and life span of clusters is reported.
- Scaling arguments are used to obtain an estimate for the lifespan, which is contrasted with experiments.
