Macroscopic characteristics of heavy particle resuspension obtained from direct numerical simulations of pressure driven channel flow

Panagiotis Saliakellis , Stergios G. Yiantsios

PII: S0301-9322(16)30261-0  
DOI: [10.1016/j.ijmultiphaseflow.2016.05.002](https://doi.org/10.1016/j.ijmultiphaseflow.2016.05.002)  
Reference: IJMF 2392

To appear in: *International Journal of Multiphase Flow*

Received date: 24 July 2015  
Revised date: 28 December 2015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Direct numerical simulations of particle resuspension in channel flow are performed.
- Onset of resuspension and particle flux vs. Shields number are close to experiments.
- Particle phase stresses are obtained on the basis of integral momentum balances.
