Exploring sensitivity of the extensional flow to wormlike micellar structure

Rose Omidvar, Alireza Dalili, Ali Mir, Hadi Mohammadigoushki

PII: S0377-0257(17)30371-3
DOI: [10.1016/j.jnnfm.2017.12.002](https://doi.org/10.1016/j.jnnfm.2017.12.002)
Reference: JNNFM 3955

To appear in: *Journal of Non-Newtonian Fluid Mechanics*

Received date: 18 August 2017
Revised date: 27 October 2017
Accepted date: 8 December 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Extensional rheology of a salt free surfactant solution is considered.
- We provide evidence for elongation induced structures in dilute solutions.
- Beyond a critical concentration linear wormlike micelles shrink in size.
- We show that extensional flow is sensitive to the structural transition.
