Rheology and microstructure of non-colloidal suspensions under shear studied with Smoothed Particle Hydrodynamics

Adolfo Vázquez-Quesada, Marco Ellero

PII: S0377-0257(15)00218-9
DOI: [10.1016/j.jnnfm.2015.12.009](https://doi.org/10.1016/j.jnnfm.2015.12.009)
Reference: JNNFM 3728

To appear in: *Journal of Non-Newtonian Fluid Mechanics*

Received date: 30 October 2015
Revised date: 19 December 2015
Accepted date: 22 December 2015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A three-dimensional SPH model of non-colloidal suspensions is presented.
- The scheme avoids the use of small time steps for divergent lubrication forces.
- Rheology of the system is studied for volume fractions up to 0.5.
- Results are compared with available simulation and experimental data.
- Close agreement with the experiments is obtained for volume fractions up to 0.35.
