Influence of feedstock-to-inoculum ratio on performance and microbial community succession during solid-state thermophilic anaerobic co-digestion of pig urine and rice straw

Lingyu Meng, Li Xie, Co Thi Kinh, Toshikazu Suenaga, Tomoyoki Hori, Shohei Riya, Akihiko Terada, Masaaki Hosomi

PII: S0960-8524(17)32244-7
DOI: <https://doi.org/10.1016/j.biortech.2017.12.099>
Reference: BITE 19354

To appear in: *Bioresource Technology*

Received Date: 16 October 2017
Revised Date: 27 December 2017
Accepted Date: 28 December 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Influence of feedstock-to-inoculum ratio on performance and microbial community succession during solid-state thermophilic anaerobic co-digestion of pig urine and rice straw
