Graphical abstract

A wear-resistant and conductive superhydrophobic coating with nest-like structure were prepared via a facile one-step method.

Highlights

- A hot water-repellent superhydrophobic mesh used for oil/water separation was prepared by one-step spray method.
- The as-prepared superhydrophobic mesh could be applied as effective materials for the separation of oil/water mixture with a temperature as high as 100 °C.
- The as-prepared superhydrophobic mesh showed excellent mechanical durability, which made it a promising material for practical oil/water separation.
