This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- Social sustainability of shale gas has been evaluated for 14 indicators.
- They include employment, public perceptions, local communities and infrastructure.
- Shale gas is compared to other fossil, nuclear and renewable fuels.
- It would generate modest employment and financial benefits for local communities.
- It would not improve energy security and would worsen other social issues.
