

## Accepted Manuscript

Title: Phase acquisition techniques for RFID multistatic setups

Author: Guillermo Alvarez-Narciandi Jaime Laviada Marcos  
R. Pino Fernando Las-Heras

PII: S0924-4247(17)31016-6  
DOI: <https://doi.org/doi:10.1016/j.sna.2017.12.012>  
Reference: SNA 10499

To appear in: *Sensors and Actuators A*

Received date: 2-6-2017  
Revised date: 4-12-2017  
Accepted date: 6-12-2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights:**

In this contribution, the highlights are:

- a) Two wireless phase acquisition techniques for signals backscattered by RFID tags are presented.
- b) Both techniques simplify the deployment of RFID multistatic systems.
- c) A localization system with centimetric accuracy was developed using the proposed phase retrieval techniques.
