This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

^cSchool of Materials Science and Engineering, The University of New South Wales, Sydney, NSW 2052, Australia

Highlights

- 1. High quality BaTiO₃ nanofibers with good alignment were fabricated.
- 2. Excellent nanoscale piezoelectric response was achieved with $d_{33, eff}$ of ~40 pm/V.
- 3. A flexible piezoelectric device with interdigital electrode was proposed.

Graphical abstractFeifei Wang is an Associate Professor in the Department of Physics in Shanghai Normal University. He obtained his Ph.D. degree from Shanghai Institute of Ceramics, Chinese Academy of Sciences in 2009. From March 2008 to March 2009, he worked as a Research Assistant at the Hong Kong Polytechnic University. Download English Version:
