This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights:**

A wireless passive pressure sensor is demonstrated up to 800°C;

Pressure sensing mechanism is based on evanescent-mode resonator;

Robust Polymer-Derived Ceramic material is used to survive harsh environments;

A soft-lithography technique is developed to build the 3-D PDC sensor structure;

A patch antenna is seamlessly integrated with the pressure sensor.
