This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Silver nanoparticles decorated graphene nanoribbon modified pyrolytic graphite sensor for determination of Histamine

Graphical Abstract

Highlights

- A silver nano particles decorated graphene nanoribbon based pyrolytic graphite sensor has been fabricated.
- The sensor surface was characterized by using FE-SEM, TEM, EIS, XRD, CV and SWV techniques.
