This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Motorized smart pipette for handheld operation of a microfluidic blood plasma separator

Graphical abstract

A motorized smart pipette is proposed as a portable pumping technology for microfluidic blood separators with advantages of high pumping controllability and stability. The clinical utility of the pumping technology was demonstrated by separating blood plasma from whole blood and successfully recovering cancer cell-derived exosomes spiked in blood.
