This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Integrated microfluidic viscometer for edible oil analysis

Graphical abstract

An integrated microfluidic viscometer based on capillary dynamics into oleophobic chips for edible oils analysis.

Highlights

- An integrated microfluidic viscometer based on capillary dynamics is reported
- The chip consists of a plastic microchannel with a protein-grafted oleophobic layer
- Its capability to discriminate pure or mixed oils of different origin is demonstrated
- The extrapolated dynamic viscosity is in direct correlation with standard rheometers
