

## Accepted Manuscript

Title: Novel Method for the Detection of the Facial Nerve Using Electrical Impedance Spectroscopy during Otologic Surgery

Authors: Joho Yun, Jinhwan Kim, Sungsu Lee, Hyong-Ho Cho, Jong-Hyun Lee

PII: S0925-4005(18)30173-4  
DOI: <https://doi.org/10.1016/j.snb.2018.01.157>  
Reference: SNB 24006

To appear in: *Sensors and Actuators B*

Received date: 25-9-2017  
Revised date: 2-1-2018  
Accepted date: 19-1-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

# Novel Method for the Detection of the Facial Nerve Using Electrical Impedance Spectroscopy during Otologic Surgery

## Graphical Abstract

## Highlights

- To avoid iatrogenic facial nerve injuries during otologic surgery.
- Electrical impedances of bone and facial nerve of a cadaver were investigated.
- Safe ranges in electrical impedance were suggested at the optimal frequencies.
- Resistance and conductivity changes were investigated according to bone thickness.
