This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Structure-driven efficient NiFe₂O₄ materials for ultra-fast response electronic
sensing platform

Graphical Abstract

A Structure-driven sensing performance gas sensor based on double
layer hollow NiFe₂O₄ core-shell nanospheres with a rapid response rate within
1 s and alluring long-term stability.
