Title: Laser activated single-use micropumps

Author: G.P. Kanakaris N. Fatsis-Kavalopoulos L.G. Alexopoulos

PII: S0925-4005(15)00553-5

DOI: <http://dx.doi.org/doi:10.1016/j.snb.2015.04.101>

Reference: SNB 18406

To appear in: *Sensors and Actuators B*

Received date: 29-1-2015

Revised date: 3-4-2015

Accepted date: 22-4-2015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We present a novel thermal micropumping method for Point of Care applications
- The method is based on expandable microspheres, photopolymers and laser activation
- We report large displaced volumes with good repeatability
- We report contained heat flow within the chip and high pressure capabilities
- We identify common ground with Lab on a Disk μ TAS.
