This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlight

- An analytical solution for **steady** fully developed MHD natural convection flow in **vertical** micro-porous-channel is presented.
- The velocity slip and temperature jump at the micro-porous-channel surfaces are taken into account.
- Exact solutions have been obtained for the velocity field, the induced magnetic field and the temperature field.
- The expressions for the induced current density and skin friction have also been obtained. The solutions obtained are graphically represented
