This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Dynamics of cooperative advertising model with exponential demand is studied.
- Four possible fixed points and their conditions for existence are found respectively.
- We prove that necessary conditions for both flip and N-S bifurcations can occur.
- The impacts of parameters on dynamics and firms profits are investigated.
- The dynamics of system with inaccurate information is also investigated.
