

Accepted Manuscript

Optimal input design for continuous-time system identification

Sergey Abrashov, Rachid Malti, Xavier Moreau, Mathieu Moze,
François Aioun, Franck Guillemard

PII: S1007-5704(17)30435-5
DOI: [10.1016/j.cnsns.2017.12.013](https://doi.org/10.1016/j.cnsns.2017.12.013)
Reference: CNSNS 4404

To appear in: *Communications in Nonlinear Science and Numerical Simulation*

Received date: 15 May 2017
Revised date: 20 November 2017
Accepted date: 29 December 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Optimal experiment design is established for continuous time rational systems.
- The proposed method is applied to fractional systems.
- Convex optimization algorithms are solved based on LMI's.
