This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- We investigate a model which describes the PT symmetric coupled nonlocal NLSE with FWM.
- We show the model completely integrable by constructing the associated Lax-pair.
- We derived various classes of exact solutions and conditions to obtain Bright-Bright, Dark-Dark, Bright-Dark and Soliton-Breather solutions.
- We show many class of soliton solutions including Peregrine solitons, Akhmediev breather, Kuznetsov-Ma breather
- We also found a new class of solution which is localized both in time and space which we called "Soliton (breather) lattice".
