This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We study a monopoly market with time varying demand function
- We propose a model based on a gradient mechanism for a boundedly rational agent
- We analytically study the case of a cyclically perturbed demand function
- We show the possibly stabilizing effect of perturbation size and agent's reactivity
- We investigate achieved profits
