This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Power-law Long-range interactions are included in a Hindmarsh-Rose neural network.
- Modulational instability is addressed both analytically and numerically.
- Quasi-periodic states are found for weak long-range coupling.
- Disordered and chaotic-like states emerge for strong long-range coupling.
