Different Types of Synchronization in Coupled Network Based Chaotic Circuits

K. Srinivasan, V.K Chandrasekar, R. Gladwin Pradeep, K. Murali, M. Lakshmanan

PII: S1007-5704(16)30074-0
DOI: [10.1016/j.cnsns.2016.03.002](https://doi.org/10.1016/j.cnsns.2016.03.002)
Reference: CNSNS 3803

To appear in: *Communications in Nonlinear Science and Numerical Simulation*

Received date: 14 January 2015
Revised date: 2 March 2016
Accepted date: 3 March 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A novel procedure based on RC phase shifted network of modified Chua's circuit, by which lag, anticipatory and complete synchronizations are observed in a coupled system without using explicit time delay or parameter mismatch.
- Employing feedback coupling with a simple switch in the experimental set up we observe different kinds of synchronization.
