Global analysis of a delayed density dependent predator-prey model with Crowley-Martin functional response

Jai Prakash Tripathi, Swati Tyagi, Syed Abbas

PII: S1007-5704(15)00209-9
DOI: [10.1016/j.cnsns.2015.06.008](https://doi.org/10.1016/j.cnsns.2015.06.008)
Reference: CNSNS 3578

To appear in: *Communications in Nonlinear Science and Numerical Simulation*

Received date: 8 December 2014
Revised date: 1 May 2015
Accepted date: 1 June 2015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A delayed predator-prey system with Crowley-Martin functional response has been proposed and studied.
- The direction and stability of Hopf bifurcation have been investigated using normal form method and center manifold theory.
- Dynamical analysis reveals the fact that fluctuation in the population levels can be prevented under certain parametric conditions.
- Theoretical results obtained in the manuscript can be used in the study of delayed Crowley-Martin type predator-prey model system with prey reserve and harvesting policy.
