This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We consider a penalty method in which the LCP could be reformulated into a nonlinear parabolic problem on an unbounded domain.
- For the unbounded computational domain, a perfectly matched layer (PML) technique is applied to truncate it.
- We use a semi-implicit finite element method (SIFEM) to solve the resulting bounded domain problem related to the option.
