This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- Linear and nonlinear fractional differential equations (FDEs) with boundary conditions (BCs) are studied;
- The Generalized Differential Transform method is extended to derive the solution of FDEs with BCs;
- Comparison with other existing numerical techniques and corresponding exact solution is reported;
- Results show the effectiveness and accuracy of the proposed procedure.
