Implementation of an iterative algorithm for the coupled heat transfer
in case of high-speed flow around a body

M.P. Galanin, V.T. Zhukov, N.V. Klyushnev, K.S. Kuzmina,
V.V. Lukin, I.K. Marchevsky, A.S. Rodin

PII: S0045-7930(18)30152-X
DOI: [10.1016/j.compfluid.2018.03.048](https://doi.org/10.1016/j.compfluid.2018.03.048)
Reference: CAF 3809

To appear in: *Computers and Fluids*

Received date: 29 September 2017
Revised date: 19 February 2018
Accepted date: 13 March 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- For high velocity vehicle, flow model is steady, body heat transfer model is unsteady
- Boundary condition convergency depends on the fluid and solid heat conductivity ratio
- In fluid domain Dirichlet BC should be set up and Neumann BC in solid one
- 1D and 3D simulations with FEM and FD methods confirm analysis conclusion
