Hydrodynamic Force of a Circular Cylinder close to the Water Surface

Chia-Ren Chu , Yu-An Lin , Tso-Ren Wu , Chung-Yue Wang

PII: S0045-7930(18)30285-8
DOI: [10.1016/j.compfluid.2018.05.032](https://doi.org/10.1016/j.compfluid.2018.05.032)
Reference: CAF 3917

To appear in: *Computers and Fluids*

Received date: 5 October 2017
Revised date: 9 April 2018
Accepted date: 30 May 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlight

- The LES model and VOF method is used to study free surface flows over a circular cylinder.
- The effects of the gap ratio, depth ratio and Froude number on the force coefficients were analyzed.
- The pressure on the cylinder is affected by the water surface when the gap ratio less than 1.50.
- When the water depth drop behind the cylinder, the drag coefficient increases.
