Particle simulation of nonequilibrium gas flows based on ellipsoidal statistical Fokker-Planck model

Yazhong Jiang , Zhenxun Gao , Chun-Hian Lee

PII: S0045-7930(18)30231-7
DOI: [10.1016/j.compfluid.2018.04.034](https://doi.org/10.1016/j.compfluid.2018.04.034)
Reference: CAF 3879

To appear in: *Computers and Fluids*

Received date: 7 January 2018
Revised date: 9 April 2018
Accepted date: 27 April 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlight:

- A two-dimensional implementation of the ellipsoidal statistical Fokker-Planck (ES-FP) model is presented.
- Analytical solution for the initial-value problem of the spatial homogeneous ES-FP equation is obtained.
- Supersonic flat-plate flows at different Knudsen numbers ranging from 0.001 to 0.1 are simulated with the ES-FP solver.
- The ES-FP simulation shows better numerical efficiency than DSMC at low Knudsen numbers.
- Numerical simulations verify the correct Prandtl number underlying the ES-FP model.
