Bubble impingement in the presence of a solid particle: a computational study

Andrea Sannino, Alessandro Esposito, Massimiliano M. Villone, Martien A. Hulsen, Gaetano D'Avino

PII: S0045-7930(18)30252-4
DOI: [10.1016/j.compfluid.2018.05.009](https://doi.org/10.1016/j.compfluid.2018.05.009)
Reference: CAF 3894

To appear in: *Computers and Fluids*

Received date: 19 January 2018
Revised date: 13 March 2018
Accepted date: 6 May 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The impingement of two gas bubbles in a Newtonian liquid is studied numerically.
- The presence of a solid spherical particle is considered.
- The solid particle can be “captured” by the coalescing bubbles or “escape” them.
- A parametric study is performed on the physical and geometrical conditions.
