This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- A new EBR-WENO scheme for problems with discontinuities on unstructured meshes is proposed.
- Combining edge-based approach with WENO monotoneization technique
- The new scheme reduces to the classical finite-difference WENO method on uniform grid-like meshes
- Lower costs thanks to the quasi-1D reconstructions
