A coupled immersed boundary and immersed interface method for interfacial flows with soluble surfactant

Wei-Fan Hu, Ming-Chih Lai, Chaouqi Misbah

PII: S0045-7930(18)30201-9
DOI: [10.1016/j.compfluid.2018.04.013](https://doi.org/10.1016/j.compfluid.2018.04.013)
Reference: CAF 3858

To appear in: *Computers and Fluids*

Received date: 30 October 2017
Revised date: 25 January 2018
Accepted date: 6 April 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A simple immersed interface method for convection-diffusion equations in moving irregular domain.
- Capturing the solution discontinuity accurately across interfaces via the usage of jump conditions.
- Application to the numerical simulation of interfacial flows with soluble surfactant.
