This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Hopf bifurcation phenomenon for singular LDC problem is studied
- Existence of universal critical Reynolds number for primary bifurcation is discussed
- Description of the flow is given, including contour plots and vorticity time series
- A complete database of frequencies involved in this flow is provided.
- Sensibility of this problem to numerical experiment conditions is explored
