This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The paper comments on a recent evaluation of LES models for the Burgers' equation.
- The recent study concluded that implicit LES should be used instead of LES.
- We show that evidence for this conclusion was only provided for non-realizable LES.
- Realizable LES should be analyzed in conjunction with the use of high-order methods.
