A Time-Dependent Eulerian Model of Droplet Diffusion in Turbulent Flow

S.D. Ryan, A.G. Gerber, A.G.L. Holloway

PII: S0045-7930(16)30046-9
DOI: [10.1016/j.compfluid.2016.03.001](https://doi.org/10.1016/j.compfluid.2016.03.001)
Reference: CAF 3107

To appear in: *Computers and Fluids*

Received date: 10 November 2015
Revised date: 23 February 2016
Accepted date: 2 March 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A new turbulent diffusion coefficient model is developed.
- The model is appropriate for, but not limited to, aerial spray modeling.
- The model accounts for inertial and time-limit effects ignored by existing models.
- The model is validated against experimental wind tunnel measurements.
