This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A flow model, valid for both cavitating and boiling flows is presented.
- The model is hyperbolic and conservative.
- It enables the capture of interfaces with phase transition.
- There are no restrictions regarding flow speed and density jumps at interfaces.
- Computational examples and validation against experimental data are given.
