

## Accepted Manuscript

Experimental accuracy assessment of various high-cycle fatigue criteria for a critical component with a complicated geometry and multi-input random non-proportional 3D stress components

K. Reza Kashyzadeh, G.H. Farrahi, M. Shariyat, M.T. Ahmadian

PII: S1350-6307(17)31009-9  
DOI: doi:[10.1016/j.engfailanal.2018.03.033](https://doi.org/10.1016/j.engfailanal.2018.03.033)  
Reference: EFA 3427

To appear in: *Engineering Failure Analysis*

Received date: 21 August 2017  
Revised date: 25 March 2018  
Accepted date: 25 March 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

# Experimental accuracy assessment of various high-cycle fatigue criteria for a critical component with a complicated geometry and multi-input random non-proportional 3D stress components
