Relationship of Compressive Stress-Strain Response of Engineering Materials Obtained at Constant Engineering and True Strain Rates

Bo Song , Brett Sanborn

PII: S0734-743X(18)30174-X
DOI: [10.1016/j.ijimpeng.2018.05.001](https://doi.org/10.1016/j.ijimpeng.2018.05.001)
Reference: IE 3099

To appear in: *International Journal of Impact Engineering*

Received date: 26 February 2018
Revised date: 27 April 2018
Accepted date: 6 May 2018

Please cite this article as: Bo Song , Brett Sanborn , Relationship of Compressive Stress-Strain Response of Engineering Materials Obtained at Constant Engineering and True Strain Rates, *International Journal of Impact Engineering* (2018), doi: [10.1016/j.ijimpeng.2018.05.001](https://doi.org/10.1016/j.ijimpeng.2018.05.001)

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Relationship of compressive stress-strain response of engineering materials based on constant engineering and true strain rates is analyzed;
- It is not necessary to specify constant engineering or true strain rates for material property characterization.
