Experimental investigation on dynamic failure of water-filled vessel subjected to projectile impact

Peng Ren , Jiaqi Zhou , Ali Tian , Renchuan Ye , Lu Shi , Wei Zhang

PII: S0734-743X(17)30947-8
DOI: [10.1016/j.ijimpeng.2018.03.009](https://doi.org/10.1016/j.ijimpeng.2018.03.009)
Reference: IE 3083

To appear in: *International Journal of Impact Engineering*

Received date: 1 November 2017
Revised date: 12 March 2018
Accepted date: 21 March 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

High lights:

- The failure modes of water-filled vessel subjected to projectile impact was investigated by using experimental method.
- The strain histories of target panels were obtained in the experiments.
- Effect of nose shape and kinetic energy of projectile on the failure modes of panels were investigated.
- The failure mechanics of water-filled vessel were examined.
