Plastic behavior of circular steel tubes subjected to low-velocity transverse impact

Rong Zhang , Xu-dong Zhi , Feng Fan

PII: S0734-743X(17)30764-9
DOI: [10.1016/j.ijimpeng.2017.12.003](https://doi.org/10.1016/j.ijimpeng.2017.12.003)
Reference: IE 3033

To appear in: *International Journal of Impact Engineering*

Received date: 8 September 2017
Revised date: 11 November 2017
Accepted date: 3 December 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Three types of indenters were used to impact steel tubes.
- The plastic dent zone of a steel tube was described in detail.
- Empirical formulae were proposed for predicting the impact response of steel tubes.
