The response of an elastic-plastic clamped beam to transverse pressure loading

H.L. Gauch , F. Montomoli , V.L. Tagarielli

PII: S0734-743X(17)30562-6  
DOI: [10.1016/j.ijimpeng.2017.10.005](https://doi.org/10.1016/j.ijimpeng.2017.10.005)  
Reference: IE 3001

To appear in: *International Journal of Impact Engineering*

Received date: 5 July 2017  
Revised date: 10 October 2017  
Accepted date: 10 October 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- We model elastic-plastic clamped beams subject to transverse pressure loading
- Models capture transition from elastic to plastic response
- Regime mechanisms maps are constructed to allow design against pressure loading
