A review of characterisation and parameters identification of materials constitutive and damage models: from normalised direct approach to most advanced inverse problem resolution

Éric Markiewicz, Bertrand Langrand, Delphine Notta-Cuvier

PII: S0734-743X(16)30774-6
DOI: [10.1016/j.ijimpeng.2017.01.028](https://doi.org/10.1016/j.ijimpeng.2017.01.028)
Reference: IE 2835

To appear in: *International Journal of Impact Engineering*

Received date: 5 October 2016
Revised date: 10 January 2017
Accepted date: 26 January 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A review of characterisation procedures for complex constitutive and damage models is done.
- The joint evolution of measurement techniques and characterisation procedures is highlighted.
- Examples of application in dynamic framework are given for several materials and testings.
