A void growth model of multiaxial power-law creep rupture involving the void shape changes

Jing-Dong Hu , Fu-Zhen Xuan , Chang-Jun Liu

PII: S0020-7403(18)30197-8
DOI: [10.1016/j.ijmecsci.2018.05.011](https://doi.org/10.1016/j.ijmecsci.2018.05.011)
Reference: MS 4321

To appear in: *International Journal of Mechanical Sciences*

Received date: 19 January 2018
Revised date: 3 May 2018
Accepted date: 4 May 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- A micro-mechanism based void growth model involving the void shape change was proposed.
- Significant effect of void shape changes was observed in the range of low stress triaxiality.
- A large fraction of creep ductility was consumed in the tertiary creep stage.
