Effect of capillary connectivity and crack density on the diffusivity of cementitious materials

Yuguo YU , Y.X. ZHANG

PII: S0020-7403(17)31988-4
DOI: [10.1016/j.ijmecsci.2017.07.058](https://doi.org/10.1016/j.ijmecsci.2017.07.058)
Reference: MS 3863

To appear in: *International Journal of Mechanical Sciences*

Received date: 27 October 2016
Revised date: 14 March 2017
Accepted date: 20 July 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A REV containing the coexistence of multiple EMT schemes is investigated.
- A three-level homogenization scheme is developed to estimate diffusivity of cement.
- The effect of capillary connectivity and crack density on diffusivity is studied.
- The developed method is applied to model the external sulfate attack.
