Field equations and general solution for axisymmetric thick shell composed of functionally graded incompressible hyperelastic materials

Yavar Anani , Gholam Hosein Rahimi

PII: S0020-7403(17)31480-7
DOI: [10.1016/j.ijmecsci.2017.06.001](https://doi.org/10.1016/j.ijmecsci.2017.06.001)
Reference: MS 3708

To appear in: *International Journal of Mechanical Sciences*

Received date: 9 January 2017
Revised date: 25 May 2017
Accepted date: 1 June 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Field equations of axisymmetric FG incompressible hyperelastic shell are presented
- The solution is applied to find stress components in general form.
- Both curvilinear and Cartesian coordinates are used to find general solution.
- Proposed power law strain energy function is used to find stress components.
- Effect of material inhomogeneity and structural parameter has been investigated.
