Dynamic modeling and analysis of the planetary gear under pitching base motion

Xinghui Qiu , Qinkai Han , Fulei Chu

PII: S0020-7403(17)32398-6
DOI: [10.1016/j.ijmecsci.2018.03.037](https://doi.org/10.1016/j.ijmecsci.2018.03.037)
Reference: MS 4247

To appear in: *International Journal of Mechanical Sciences*

Received date: 26 August 2017
Revised date: 18 March 2018
Accepted date: 27 March 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A coupled dynamic model of planetary gear under pitching base motion is proposed.
- Pitching base motion causes additional damping, stiffness and forced excitation.
- Influence rules of pitching base motion on load sharing and spectra are derived.
- Load sharing is positively correlated to amplitude of additional forced frequency.
