Yield surfaces of periodic honeycombs with tunable Poisson's ratio

Xiang Li , Zixing Lu , Zhenyu Yang , Qingsong Wang , Yao Zhang

PII: S0020-7403(18)30474-0
DOI: [10.1016/j.ijmecsci.2018.04.005](https://doi.org/10.1016/j.ijmecsci.2018.04.005)
Reference: MS 4258

To appear in: *International Journal of Mechanical Sciences*

Received date: 11 February 2018
Revised date: 1 April 2018
Accepted date: 3 April 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A coupling effect between shear and axial stress on the yield surfaces is proposed.
- Coupled effect depends on the honeycomb types and their yield strains of the matrix.
- Yield surfaces of several typical honeycombs under in-plane loading are obtained.
- Uniaxial strengths have a remarkable increase with a flexible cell wall augmented.
